

**Removal of Wound Scars:** To reduce the scars of wounds developed as a result of trauma or surgery, by using various treatment methods with evaluating the specific conditions of patient.

## AESTHETIC SURGERY OPERATIONS

**Nose Operations:** While performing aesthetics, deviation can be corrected at the same time.

**Face Lifting and Rejuvenation:** The relaxed and loose facial skin stretched and a younger face appearance is gained. Neck and forehead wrinkles can be stretched at the same operation.

**Eye Lid Operations and Removal of Under Eye Sacs:** By removing the excess skin and fat in the upper and lower eyelids, the sacs which bring tired appearance to the person are eliminated.

**Botox and Filling Materials (Hyaluronic Acid and Similar):** They are the methods used in not very deep wrinkles. Botox is injected to the muscles under the wrinkled skin in small amounts and the principal of the related muscle not to loosen and provide wrinkle for 6-8 months is applied.

**Correction of Ear Deformities:** Usually performed due to prominent ears. This intervention should be performed before the age of school since the development of ear is completed at the age of 5 - 6 years.

**Breast Enlargement:** Silicone implants which are used to normalize the underdeveloped or small breasts are filled with gel silicon or saline and

covered with a silicon membrane. After these implants which are in various composition, shape and projection are inserted you can return your normal activities within 4-5 days.

**Breast Reduction:** Patients experience complaints such as back pain, skin rashes due to saggy and big breasts. Besides this, the operation can be performed to every patient who wants to have a proportional body.

**Elimination of Facial Acne Scars:** Good results can be obtained within 7-10 days with methods such as chemical peeling.

**Gynecomasty:** This state which can be explained as the physiologic or pathologic big size of male breast is a frequent problem in the society that plastic surgery concerns.

**Liposuction:** It is an operation for reshaping the body.

In a unique way we combine the quality and reassurance of a renowned academic medical center with the service, comfort and discretion you have the right to expect...

At Baskent University Aesthetic, Plastic & Reconstructive Department, we are proud of ourselves on our patient-centric approach to healthcare, which means that care delivery is shaped for the individual, their condition and individual needs. We promise a unique experience from the time you consult with one of our professional surgeons to the time you leave. The surgical unit is uniquely designed to provide comfort, confidence and convenience to our clients. Our team of surgeons provides a wide range of aesthetic techniques from invasive to non-invasive procedures. Our operating theatres are fully equipped with modern technology and equipment providing the ideal environment for

our highly qualified talented surgeons to perform any of the procedures listed below smoothly and efficiently.

The Aesthetic, Plastic & Reconstructive Department is a modern clinic affiliated with the Baskent University, and is unique in Turkey. Thus, maximum safety and security can be provided, with state of the art plastic surgical procedures – in a modern environment.

Most important is health, most appealing is appearance. Thus, deficits in outer appearance may lead to loss of self-esteem and social isolation. A goal of aesthetic surgery, being one of the pillars of plastic surgery, is improvement of outer appearance, thus, improving quality of life.

A prerequisite for achievement of predictable and appealing postoperative results following aesthetic procedures is long lasting training in plastic surgery in an accredited program. Our physicians are experienced board certified plastic surgeons and staff members of the Department of Aesthetic, Plastic & Reconstructive Surgery at the Baskent University. As such they are dedicated to clinical and academical excellence.

In a first-class, comfortable setting experienced board certified plastic surgeons offer consultation for the entire range of aesthetic surgery procedures. State-of-the-art operation theatres allow our surgeons to perform surgery at the highest level.
